Saïfoulaye DIALLO

Backend Software Engineer | Enterprise Platforms • Payment
Infrastructure • Distributed Systems | Java • Spring Boot • AWS
Département de Pikine, Région de Dakar, Sénégal

Résumé

I build backend platforms that power enterprise applications, banking systems, and payment infrastructure. Over the past 4+ years, I've specialized in Java, Spring Boot, distributed systems, and cloud-native architectures, delivering software that is reliable, scalable, and built for long-term evolution. My work spans API design, enterprise integrations, payment systems, and event-driven architectures. I enjoy simplifying complex systems, improving reliability, and designing backend services that teams can confidently operate in production. I'm passionate about Backend Engineering, Enterprise Platforms, FinTech, and Software Architecture. If you're building scalable Java platforms, modern payment infrastructure, or mission-critical backend systems, I'd be happy to connect. Email: saifoulaye.diallo0512@gmail.com

Expérience

SYNAPSE GROUPE

Backend Engineer | Banking Systems (Client : Bank of Africa - Groupe Bank of Africa)

février 2025 - Present (1 an 6 mois)

Commune de Ngor

Contribute to the evolution and modernization of enterprise banking platforms supporting critical financial operations across Bank of Africa Group.

Key Contributions

- # Designed and evolved backend services supporting critical banking capabilities, including payments, transfers, and transaction processing.
- # Built enterprise APIs enabling secure communication between banking applications, middleware, and third-party systems.
- # Modernized backend services by improving maintainability, reliability, and operational resilience within a high-availability banking environment.

- # Partnered with product, integration, and engineering teams to deliver production-ready solutions supporting multiple Bank of Africa entities.
- # Contributed to software quality through code reviews, defect resolution, and continuous improvements to engineering practices.

Technology :

Java • Spring Boot • API Design • Docker • Kubernetes • CI/CD • JasperReports • Microservices • Clean architecture • Agile (Scrum)

Bank of Africa - Groupe Bank of Africa
Backend Software Engineer | Banking & Payment Systems
février 2025 - Present (1 an 6 mois)
Arrondissement des Almadies

Employed by Synapse Groupe

- # Supporting enterprise banking platforms used across 11+ Bank of Africa subsidiaries.
- # Contributing to banking platforms serving multiple entities within the Bank of Africa Group.

ENG Technologie Groupe
Software Engineer | FinTech & Payments
juillet 2023 - février 2025 (1 an 8 mois)
Arrondissement de Dakar-Plateau, Région de Dakar, Sénégal

Contributed to the development of a FinTech platform supporting digital lending, payment processing, and financial operations.

Key Contributions

- # Designed and implemented backend microservices powering customer onboarding, financial operations, and payment workflows.
- # Integrated Wave and Orange Money services to automate payment processing and improve transaction reliability.
- # Implemented asynchronous processing patterns to increase scalability and support growing transaction volumes.
- # Strengthened API security with Spring Security and industry-standard authentication and authorization mechanisms.
- # Improved deployment efficiency by optimizing CI/CD pipelines and streamlining release processes.

Technology :

Java • Spring Boot • AWS • PostgreSQL • Apache Kafka • Docker • GitLab CI/CD • API Design • Agile Scrum

Mafalia-Ecom & Fintech apps for Informal retailers

Software Engineer | SaaS Platform

juin 2022 - novembre 2023 (1 an 6 mois)

Dakar Region, Senegal

Contributed to the development of a SaaS platform helping SMEs manage sales, inventory, orders, and financial operations.

Key Contributions

- # Built backend services and REST APIs supporting inventory management, order processing, sales, and financial workflows.

- # Improved application performance by optimizing database queries and business processing, reducing response times by approximately 30%.

- # Implemented caching strategies and asynchronous processing to support platform scalability and growing business demand.

- # Collaborated with product and engineering teams to improve operational efficiency and user experience.

Contributed to technical documentation and continuous improvements in software quality and maintainability.

Technology :

Java • Spring Boot • MySQL • Angular • TypeScript • REST APIs • Agile XP

SarayaTech Senegal

Software Engineer

décembre 2021 - mai 2022 (6 mois)

Senegal

Contributed to the development of a healthcare platform supporting clinical, pharmaceutical, and laboratory operations.

Key Contributions

- # Developed backend services and full-stack features supporting patient management, consultations, prescriptions, and healthcare workflows.

- # Designed secure and scalable REST APIs enabling communication across multiple business modules.

- # Improved application performance through caching mechanisms and asynchronous processing.
- # Participated in code reviews, testing, and engineering initiatives to improve software quality and development standards.

Technology

Java • Spring Boot • Angular • REST APIs • Scrum • Jira

Formation

Université numérique Cheikh Hamidou KANE (UN-CHK)

Master in Software Engineering , Computer and Information Sciences and Support Services · (mai 2024)

Université numérique Cheikh Hamidou KANE (UN-CHK)

Bachelor's degree, Mathematics and Computer Science · (janvier 2020 - mai 2024)

SarayaTech BootCamp

Computer Programming · (janvier 2022 - octobre 2022)
