## PROFESSIONAL SUMMARY

Backend software engineer specializing in payment infrastructure, banking platforms, and enterprise APIs. 4+ years shipping production Java / Spring Boot systems — payment rails, mobile-money integrations (Wave, Orange Money), and high-availability services for 11+ Bank of Africa Group subsidiaries via Synapse. Strong in API design, event-driven backends, clean architecture, and delivery with cross-functional teams. Based in Dakar (GMT); bilingual French / English; open to remote freelance delivery, contract engineering, and architecture review worldwide.

## CORE KEYWORDS

Java, Spring Boot, Spring Security, REST APIs, Microservices, Payment Processing, Mobile Money, Wave, Orange Money, Banking Systems, FinTech, Kafka, PostgreSQL, Oracle, Redis, Docker, Kubernetes, AWS, CI/CD, Domain-Driven Design, Clean Architecture, OpenAPI, OAuth2, JWT, Agile

## PROFESSIONAL EXPERIENCE

### Backend Engineer — Banking Systems

Feb 2025 – Present

Synapse Groupe — Client: Bank of Africa Group

Dakar, Senegal

- Design and evolve backend services for payments, transfers, and transaction processing on enterprise banking platforms across 11+ Bank of Africa Group subsidiaries.
- Deliver secure enterprise APIs connecting banking applications, middleware, and third-party systems — versioned contracts, request audit logging, and core systems kept off the public edge. Apply append-only posting and reconciliation so money movement stays explainable to finance, audit, and compliance.
- Modernize critical services for maintainability and operational resilience under high-availability constraints; partner with product, QA, and multi-team engineering on Agile delivery.
- *Stack:* Java, Spring Boot, Docker, Kubernetes, CI/CD, JasperReports, Microservices, Clean Architecture, Scrum.

### Software Engineer — FinTech & Payments

Jul 2023 – Feb 2025

ENG Technologie Group

Dakar, Senegal

- Built backend microservices for digital lending, customer onboarding, and payment workflows on a FinTech platform.
- Integrated Wave and Orange Money to automate payment processing; applied Kafka-oriented event flows and explicit idempotency so retries do not create duplicate debits.
- Hardened APIs with Spring Security and strengthened reliability of production payment operations.
- *Stack:* Java, Spring Boot, AWS, PostgreSQL, Apache Kafka, Docker, GitLab CI/CD, Scrum.

### Software Engineer — SaaS Platform

Jun 2022 – Nov 2023 (parallel with ENG from Jul 2023)

Mafalia — Ecom & Fintech Applications

Dakar, Senegal

- Owned backend services and REST APIs for inventory, orders, sales, and financial workflows on a multi-tenant SaaS helping SMEs run day-to-day operations.
- Improved performance through query optimization, caching, and asynchronous processing so reporting stayed off the checkout path.
- *Stack:* Java, Spring Boot, MySQL, Angular, TypeScript, REST APIs, Agile XP.

### Software Engineer

Dec 2021 – May 2022

SarayaTech Senegal

Senegal

- Delivered backend services and full-stack features for patient management, consultations, and prescriptions on a clinical platform.
- Designed secure, scalable REST APIs across business modules; improved performance with caching and async processing.
- *Stack:* Java, Spring Boot, Angular, REST APIs, Scrum.

## SELECTED PROJECTS

### Pan-African Payment SDK

Payment Infrastructure

- One API to initiate, confirm, and reconcile payments across Orange Money, Wave, and Free Money via provider adapters — 3+ wallets behind a single contract.
- Spring Boot adapters, Redis idempotency keys, Kafka settlement events, signed requests, and webhook HMAC validation. Patterns proven on ENG Technologie FinTech delivery.

- Unified API Gateway

Enterprise / Banking Integrations

  - Gateway as the boundary for auth, routing, rate limits, and provider orchestration across multi-entity banking integrations.
  - JWT at the edge, RBAC, request audit logging, and versioned REST contracts to protect core systems while opening partner APIs. Patterns from Synapse delivery for Bank of Africa Group subsidiaries.
- Ecom 360 PME

SaaS Commerce Platform

  - All-in-one commerce platform: POS, real-time inventory, Wave & Orange Money on each sale, multi-store operations, and accountant-ready exports.
  - Angular SPA with a Spring Boot multi-tenant REST API, async reporting jobs, and role-based staff access — 500+ active merchants across Senegal and West Africa. [ecom360pme.com](http://ecom360pme.com)

TECHNICAL SKILLS

**Languages:** Java (8–21), TypeScript, JavaScript, SQL  
**Backend:** Spring Boot, Spring Security, Spring Data JPA, Spring Cloud Gateway, REST APIs, OpenAPI / Swagger, OAuth2, JWT, NestJS, GraphQL  
**Frontend:** Angular, React, Next.js, TypeScript, HTML5, CSS3, Tailwind CSS  
**Cloud & DevOps:** AWS, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins, Maven, Git  
**Architecture:** Microservices, Modular Monolith, Clean / Hexagonal Architecture, DDD, Event-Driven Design, API-First  
**Data & Messaging:** PostgreSQL, Oracle, MySQL, Redis, MongoDB, Kafka, RabbitMQ  
**Domains:** Banking Systems, FinTech, Payment Processing, Mobile Money, Enterprise Integrations
